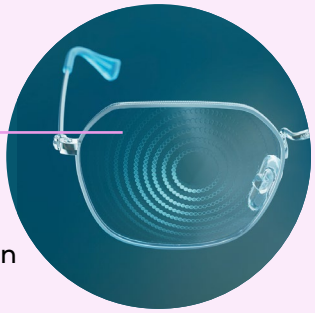
DISCOVER STELLEST® LENSES

Correct and control myopia progression

Millions of people have myopia, also known as nearsightedness. But many don't know that myopia begins in childhood – and tends to get worse over time. When it comes to correcting vision and keeping myopia in check, Stellest® lenses are the clear solution. They are clinically proven to correct nearsighted vision and slow the progression of myopia in kids.[1]

What makes Stellest lens unique?

CORRECT MYOPIA
A large single vision zone to ensure sharp vision



CONTROL MYOPIA PROGRESSION
H.A.L.T.[2] technology uses a constellation of 1,021 invisible lenslets acting as a shield against myopia progression.

Ask your eye care provider if Stellest® lenses are the right solution for your dependent.

As an EyeMed member, you may be able to use your vision benefits to help cover costs when purchasing Stellest® lenses at in-network providers. For more details about your plan scan the QR code or go to **eyemed.com/member**.

[1] Compared to single vision lenses, when worn 12 hours a day. Results from a prospective, randomized, double-masked, multicenter U.S. clinical trial in myopic children aged 6-12 years at initiation of treatment.

[2] H.A.L.T.: Highly Aspherical Lenslet Target and does not imply a "halt" or "stop" of myopia progression.

EyeMed, LensCrafters, Target Optical and Pearle Vision are owned by the same ultimate parent company, EssilorLuxottica.
